FIND YOUR PLAN

Tell us what you deliver in a typical month and we'll do the math.

Single report
Pay as you go. One site, one professional deliverable.

Monthly
A report allowance plus seats for your field team.

Annual
The best rate for steady survey campaigns.

Interested in Enterprise level management? Contact us for customized environments.

BUILT FOR

- WATER AGENCIES
- GOVERNMENTAL AGENCIES
- PROPERTY MANAGERS
- LANDSCAPE INDUSTRY

AQUANTIC SOLUTIONS

WATER SURVEY PLATFORM

From the field to solutions.

Site surveys, professional water-use reports, and savings tracking. Without cell service in the field.

THREE SURVEY FORMATS

Residential

Indoor and outdoor water-use survey with fixture inventory, irrigation assessment, recommendations, and an executive summary written for the homeowner.

Large Landscape

A full irrigation audit for HOAs, parks, and campuses: distribution uniformity, zone-by-zone findings, and a list of deficiency corrections to deliver and track change over time, with ongoing management capabilities.

Commercial / Industrial / Institutional

Facility water use and landscape irrigation together, in a format built for property managers.

One field workflow produces the right deliverable for every property class.

HOW IT WORKS

STEP ONE

Survey on-site

Walk the property with the app: controllers, stations, meters, indoor fixtures, photos, all without cell service. Syncs when reconnected.

STEP TWO

Generate the report

Pick the format, toggle the sections, and add your recommendations. The PDF is built for you, branded and consistent, every time.

STEP THREE

Deliver and track

Send the report, log the job, and watch each site's actual use against its water budget over time.

BEYOND THE SURVEY

- **ET water budgets.** Every report can compare a site's metered use against what an efficiently operating system should need, month by month.
- **Weather-based guidance.** Per-zone run-time recommendations from local weather conditions for site maintenance.
- **Maintenance reports.** Recurring visit tracking with a customer-ready report: what was done, what was observed, and when the next visit is scheduled.
- **Works offline.** The whole field workflow runs without cell service and syncs when you're back in range.

SEE IT WITH YOUR OWN SITES
